

Individual forward scattering graph contributions at  $\mu_r = m_Z$  as a function of  $\sqrt{s}$

Relative aggregate contributions & cancellations

Cum. relative |contribution| from percentiles of forward scattering graphs (ranked per  $\sqrt{s}$  by magnitude)

Inclusive cross-section for  $\gamma\gamma \rightarrow t\bar{t}$  ( $\mu_r = m_Z$ ), with  $n_f = 5$  and  $n_h(m_t) = 1$
